INTRODUCTION

Developed an AI-powered tool for automatic text summarization that converts lengthy content into concise summaries. It uses Transformer-based Generative AI models and supports TXT/PDF files and direct text input to provide Highlights of important words and key sentences

GEN Ai- SUMMARY PLATFORM

Large Document

AI Summarization

Time-consuming Reading

Concise Information

PROBLEM STATEMENT & OBJECTIVE

- Long documents require significant reading time and important information can be difficult to identify. Also, manual summarization is time-consuming.
- Objective: automate concise and meaningful summarization and provide visual identification of key information.

SYSTEM ARCHiTECTURE

- User enters text or uploads PDF/TXT
- Streamlit handles the user interface
- NLP preprocessing prepares the input
- BART/T5 generates the summary
- Results are displayed with visual highlights

Conclusions

The project demonstrates how Generative AI and NLP can efficiently summarize lengthy documents. It provides concise summaries while highlighting important words and key information.

THANK
YOU
